

European Technical Assessment

ETA 22/0803 of 25/11/2022

English translation prepared by IETcc. Original version in Spanish language

General Part

Manufacturer:

Technical Assessment Body issuing the ETA designated according to Art. 29 of Regulation (EU) 305/2011:

Trade name of the construction product: Product family to which the construction product belongs: Instituto de Ciencias de la Construcción Eduardo Torroja (IETcc)

BTP, BTP-G, BTP-X, BTP-A4

Torque controlled expansion anchor made of galvanized steel, sherardized steel or stainless steel of sizes M8, M10, M12, M16, M20 and M24 for use in cracked or uncracked concrete.

Ningbo Bigood Metal Technology Co. Ltd. No 19, Eastern section of Hongtang South Road Ningbo. China. website: www.nbbigood.com

Manufacturing plants:

This European Technical Assessment contains:

This European Technical Assessment is issued in accordance with regulation (EU) No 305/2011, on the basis of: Ningbo Bigood Metal Technology plant 1.

18 pages including 3 annexes which form an integral part of this assessment.

European Technical Assessment EAD 330232-01-0601 "Mechanical fasteners for use in concrete", ed. December 2019

This European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission according to article 25 (3) of Regulation (EU) No 305/2011.

Page 3 of European Technical Assessment ETA 22/0803 of 25/11/2022

English translation prepared by IETcc

SPECIFIC PART

1. Technical description of the product

The Ninbgo Bigood BTP wedge anchor in the range of M8, M10, M12, M16, M20 and M24 is an anchor made of galvanised steel. The Ningbo Bigood BTP-G wedge anchor in the range of M8, M10, M12, M16 and M20 is an anchor made of sherardized steel. The Ningbo Bigood BTP-X wedge anchor in the range of M8, M10, M12, M16 and M20 is an anchor made of galvanized steel. The Ningbo Bigood BTP-A4 wedge anchor in the range of M8, M10, M12, M16 and M20 is an anchor made of stainless steel. The anchor is installed into a predrilled cylindrical hole and anchored by torque-controlled expansion. The anchorage is characterized by friction between expansion clip and concrete.

Product and installation descriptions are given in annexes A1 and A2.

2. Specification of the intended use in accordance with the applicable European Assessment Document.

The performances given in section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a mean to choosing the right products in relation to the expected economically reasonable working life of the works.

3. Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance to tension load (static and	See Annex C1, C3 and C4
quasi-static loading) Method A	
Characteristic resistance to shear load (static and quasi-static loading).	See Annex C1 and C5
Displacements	See Annex C6
Characteristic resistance and displacements for seismic performance category C1 and C2	See Annex C7 and C8

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for class A1
Resistance to fire	See annexes C9 and C10

4. Assessment and Verification of Constancy of Performances (hereinafter AVCP) system applied, with reference to its legal base

The applicable European legal act for the system of Assessment and Verification of Constancy of Performances (see annex V to Regulation (EU) No 305/2011) is 96/582/EC.

The system to be applied is 1.

5. Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document.

The technical details necessary for the implementation of the AVCP system are laid down in the quality plan deposited at Instituto de Ciencias de la Construcción Eduardo Torroja.

Instituto de Ciencias de la Construcción Eduardo Torroja CONSEJO SUPERIOR DE INVESTIGACIONES CIENTÍFICAS

C/ Serrano Galvache n.º 4. 28033 Madrid. Tel: (+34) 91 302 04 40 <u>https://dit.ietcc.csic.es</u>

On behalf of the Instituto de Ciencias de la Construcción Eduardo Torroja Madrid, 25th of November 2022

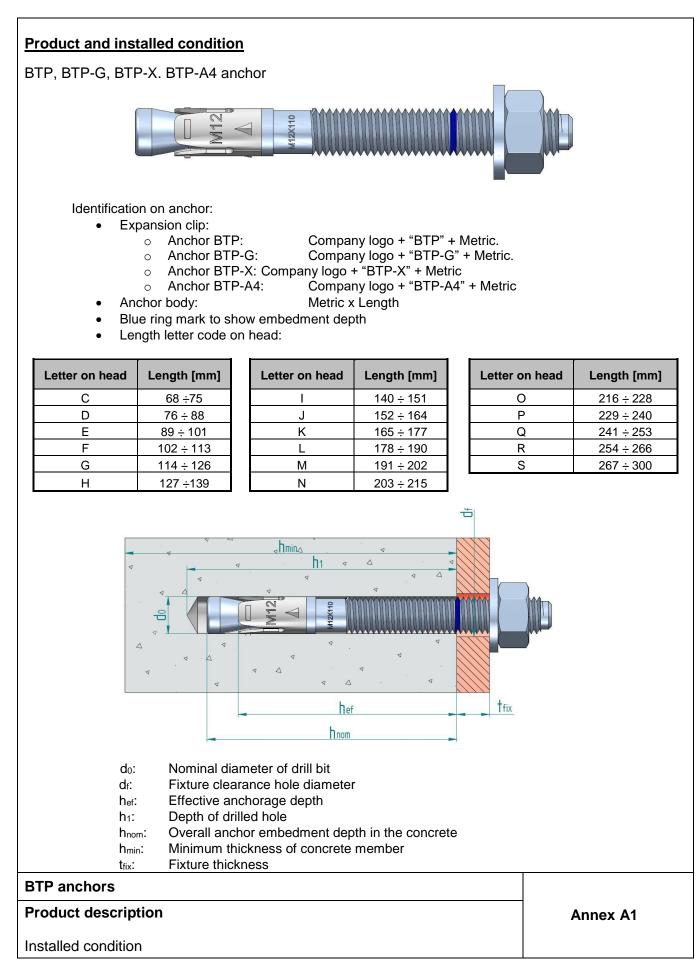

Table A1: materials

Item	Designation	Material for BTP	Material for BTP-G
1	Anchor body	M8 to M20: carbon steel wire rod, galvanized ≥ 5 μm ISO 4042 Zn5/An/T0 with antifriction coating M24: machine carbon steel, galvanized ≥ 5 μm ISO 4042 Zn5/An/T0 with antifriction coating	Carbon steel wire rod, sherardized ≥ 40 µm EN 13811
2	Washer	DIN 125, DIN 9021, DIN 440 galvanized ≥ 5 µm ISO 4042 Zn5/An/T0	DIN 125, DIN 9021, DIN 440 sherardized ≥ 40 µm EN 13811
3	Nut	DIN 934 class 6, galvanized ≥ 5 µm ISO 4042 Zn5/An/T0	DIN 934 class 6, sherardized ≥ 40 µm EN 13811
4	Expansion clip	Stainless steel	Stainless steel

Item	Designation Material for BTP-X		Material for BTP-A4
1	Anchor body	Carbon steel wire rod, galvanized ≥ 5 µm ISO 4042 Zn5/An/T0 with antifriction coating	Stainless steel, grade A4
2	Washer	DIN 125, DIN 9021, DIN 440 galvanized ≥ 5 µm ISO 4042 Zn5/An/T0	DIN 125, DIN 9021, DIN 440 stainless steel, grade A4
3	Nut	DIN 934 class 6 galvanized ≥ 5 µm ISO 4042 Zn5/An/T0	Stainless steel, grade A4 with antifriction coating
4	Expansion clip	Carbon steel strip, sherardized ≥ 15 µm EN 13811	Stainless steel, grade A4, galvanized ≥ 5 µm ISO 4042 Zn5/An/T0

Base materials:

- Reinforced or unreinforced normal weight concrete without fibres according to EN 206:2013+A1:2016
- Strength classes C20/25 to C50/60 according to EN 206:2013+A1:2016
- Cracked or uncracked concrete

Use conditions (environmental conditions):

- BTP, BTP-X: anchorages subjected to dry internal conditions.
- BTP-G:
 - Anchorages in cracked concrete: dry internal conditions
 - Anchorages in uncracked concrete: durability depending on the following environmental corrosivity categories according to ISO 9223:2012:

Corrosivity category	Corrosivity	Durability [years]
C1	Very low	50 ¹⁾
C2	Low	50 ¹⁾
C3	Medium	19
C4	High	9.5
C5	Very high	4.7
СХ	Extreme	

1) Working life of fastener limited to 50 years according to EAD 330232-01-0601 section 1.2.2

 BTP-A4: anchorages subjected to dry internal conditions, to external atmospheric exposure (including industrial and marine environment) or to permanent internal damp conditions if no particular aggressive conditions exist. Such particular aggressive conditions are e.g., permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g., in desulphurization plants or road tunnels where de-icing materials are used). Atmospheres under Corrosion Resistance Class CRC III according to EN 1993-1-4:2006+A1:2015 annex A.

BTP anchors	
Intended use	Annex B1
Specifications	

Corrosivity	Corrosivity	Typical envi	ronments – Examples
category		Indoor	Outdoor
C1	Very low	Heated spaces with low relative humidity and insignificant pollution; e.g., offices, schools, museums.	Dry or cold zone, atmospheric environment with very low pollution and time of wetness; e.g., certain desserts, Central Artic/Antarctic.
C2	Low	Unheated spaces with varying temperature and relative humidity. Low frequency of condensation and low pollution; e.g., storage, sport halls.	Temperate zone, atmospheric environment with low pollution (SO ₂ < 5 μ g/m ³); e.g., rural areas, small towns. Dry or cold zone, atmospheric environment with short time or wetness, e.g., deserts, subarctic areas.
C3	Medium	Spaces with moderate frequency of condensation and moderate pollution from production process; e.g., food-processing plants, laundries, breweries, dairies.	Temperate zone, atmospheric environment with medium pollution (SO ₂ 5 μ g/m ³ to 30 μ g/m ³), or some effect of chlorides, e.g., urban areas, coastal areas with low deposition of chlorides. Subtropical and tropical zone, atmosphere with low pollution.
C4	High	Spaces with high frequency of condensation and high pollution from production process; e.g., industrial processing plants.	Temperate zone, atmospheric environment with high pollution (SO ₂ 30 μ g/m ³ to 90 μ g/m ³), or substantial effect of chlorides; e.g., polluted urban areas, industrial areas, coastal areas without spray of salt water or exposure to strong effect of de-icing salts. Subtropical and tropical zone, atmosphere with medium pollution.
C5	Very High	Spaces with very high frequency of condensation and/or high pollution from production process; e.g., mines, caverns for industrial purposes, unventilated sheds in subtropical and tropical zones	Temperate zone, atmospheric environment with very high pollution (SO ₂ 90 μ g/m ³ to 250 μ g/m ³), or significant effect of chlorides; e.g., industrial areas, coastal areas, sheltered positions on coastline. Subtropical and tropical zone, atmosphere with medium pollution.
СХ	Extreme	Spaces with almost permanent condensation or extensive periods of exposure to extreme humidity effects and/or high pollution from production process; e.g., unventilated sheds inhumid tropical zones with penetration of outdoor pollution including airborne chlorides and corrosion- stimulating particulate matter	Subtropical and tropical zone (very high time of wetness), atmospheric environment with very high SO ₂ pollution (higher than 250 μ g/m ³) including accompanying and production factors and/or strong effect of chlorides; e.g., extreme industrial areas, coastal and offshore areas, occasional contact with salt spray.

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete.
- Verifiable calculation rules and drawings are prepared taking into account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages under static or quasi-static actions are designed for design method A in accordance with EN 1994-4:2018
- Anchorages under seismic actions are designed in accordance with EN 1992-4:2018. Anchorages shall be positioned outside of critical regions (e.g. plastic hinges) of the concrete structure. Fastening in stand-off installation or with grout layer are not allowed.
- Anchorages under fire exposure are designed in accordance with EN 1992-4:2018. It must be ensured that local spalling of the concrete cover does not occur.

Installation:

- Hole drilling by rotary plus hammer mode.
- Anchor installation carried out by appropriately qualified personal and under the supervision of the person responsible for technical matters of the site.
- In case of aborted hole: new drilling at a minimum distance away of twice the depth of aborted hole or smaller distance if the aborted hole is filled with high strength mortar and if under shear or oblique tension load it is not the direction of the load application.

Table C11: Essential characteristics under fire exposure BTP, BTP-G, BTP-X anchors

¹⁾ Respective values for anchors BTP / BTP-G, BTP-X

²⁾ As a rule, splitting failure can be neglected since cracked concrete and reinforcement is assumed.

In absence of other national regulations the partial safety factor for resistance under fire exposure $\gamma_{m,fi}$ = 1,0 is recommended
